

Nagarajan Subramani

Senior Application Software Engineer

Java and Microservices | Oracle Database | CI/CD Automation

Krishnagiri, Tamil Nadu, India | +91 9566849766 | rajgceb@rediffmail.com

Professional Summary

Software developer with 15+ years of IT experience across Oracle, BNY Mellon and Mphasis. Experience in Java services, transaction-based credit scoring, Oracle SQL and PL/SQL, UNIX automation, Jenkins CI/CD and banking application support.

Technical Skills

Development: Java, Spring AI, REST APIs, microservices, SQL, PL/SQL, UNIX/Linux shell scripting; Perl and Pro*C support

Build and delivery: Jenkins, Groovy, CI/CD pipelines, Gradle, Git, GitLab, JAR deployment

Databases: Oracle Database, SQLcl, SQL*Plus, SQL Developer, Toad; SQL Server and Informatica basics

Services and operations: Tomcat, API Gateway, Eureka, production support, disaster recovery

Additional tools: Jira, Eclipse, PuTTY; Python service deployment support

Professional Experience

Oracle Financial Services Software Limited

Senior Application Software Engineer

25 May 2022 - 14 October 2026 (expected)

- Worked with Spring AI in Java and Spring Boot applications.
- Worked on Java-based decision services that calculate customer credit scores using transaction data to support credit assessment.
- Maintained and enhanced Jenkins CI/CD pipelines using Groovy and Linux shell scripts for banking microservices, including parameterized jobs, artifact retrieval and deployment orchestration.
- Supported Oracle Database deployments and application configuration using SQLcl, SQL*Plus and SQL scripts, including service parameters and deployment diagnostics.
- Troubleshoot Java builds and service deployments involving Gradle dependency resolution, artifact repository access, runtime configuration and application startup.
- Configured the JaCoCo Java agent to collect code coverage data for backend services.
- Executed API test collections using Postman and Newman.
- Configured OWASP ZAP to scan backend services for security vulnerabilities through API Gateway URLs.
- Remediated security vulnerabilities by applying Oracle WebLogic patches and Java version updates.
- Installed Oracle Database software, brought database instances online, and performed database export and import operations.
- Installed Oracle WebLogic using Chef Solo, with recipes, cookbooks and data bags.
- Configured and supported Tomcat services, API Gateway routing and Eureka service discovery, including HTTP/HTTPS protocols and service ports.
- Enhanced deployment pipelines for AI platform services with Java JVM options, database connection settings and service runtime parameters.
- Supported Python service deployment through Jenkins, troubleshooting package installation, shared-library dependencies, imports and Uvicorn startup.

Professional Experience Continued

BNY Mellon

Senior Software Engineer

May 2014 - May 2022

- Developed Java modules and REST services that retrieved database data and mapped request and response objects; supported API integration with other teams.
- Deployed and supported JAR packages, investigated errors using application logs and debug messages, and maintained scripts for request-count and performance reporting.
- Supported daily loading of approximately 1,000 Oracle tables, with schedules for business days and holidays and reusable scripts for different loading requirements.
- Processed fixed-width and delimited files into Oracle tables, including partitioned tables and external-table loads; worked with replication tables and Oracle directory files.
- Supported database performance tuning through partitioning, indexes and table statistics; contributed a reusable component for analyzing Oracle table fragmentation.
- Automated UNIX batch processing, cross-server file transfers, web activity reports and email notifications; migrated legacy Perl and Pro*C processing to batch scripts.
- Coordinated production issue resolution with DBAs and production control, supplied UAT data, maintained job documentation and supported code reviews and production releases.
- Supported disaster recovery activities and traffic routing; wrote SQL Server procedures and linked-server queries and created SQL Server Agent jobs.

Mphasis

Associate Software Engineer

February 2011 - February 2014

- Supported business applications using UNIX, Oracle SQL and PL/SQL, and basic Informatica development.
- Enhanced business logic and created Informatica mappings for new requirements; monitored workflows and reviewed execution statistics.
- Migrated UNIX jobs and Informatica mappings to production and supported issue resolution and delivery within agreed timelines.

Education

Bachelor of Engineering in Computer Science and Engineering

Government College of Engineering, Bargur, Anna University | May 2010

Professional Training

Oracle, PL/SQL and UNIX - three-month training at Mphasis Learning Academy, Mangalore, 2010.
